

Lipolaser

The body you always dreamed of...

Dr. Juan Corado
AESTHETIC CLINIC

What it is?

Lipolaser **reduces localised fat** and moderates flaccidity in different areas of the body by removing adipose tissue.

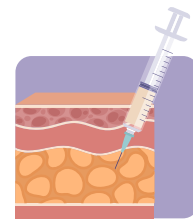

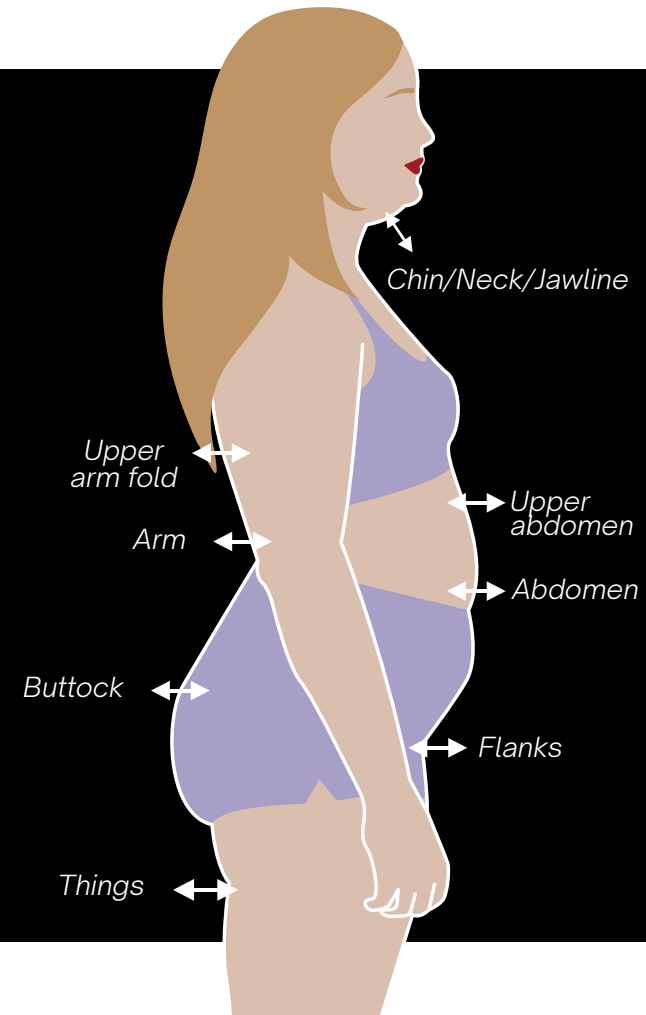

Intervention

This less invasive treatment can be performed under **local anaesthesia**, with or without sedation and needs no hospital stay.

Results

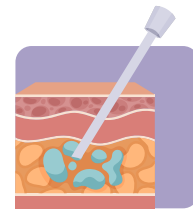

The **result** can be **permanent** if the patient takes care of himself and follows his doctor's recommendations.

 **Duration 1 to 2 hours**

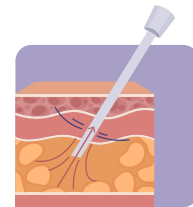

Phase 1

The first one we put **local anaesthesia** on localised fat.

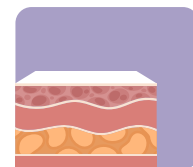

Phase 2

The second one with a **laser** where we put it in the localised fat and **insert the cannula**.

Phase 3

We **remove the localised fat** dissolved by the laser with the **cannula**.

Phase 4

The doctor proceeds to bandage the treated area and **advise** the patient for **post-treatment**.
